## PRESSURE PUMPS

High pressure in these pumps is generated by triplex plunger pump block. It is a positive displacement pump. These pumps are equipped with either standard pistons or plungers. Operation principle is shown in figure below.

Piston pump Plunger pump

We can supply triplex pressure pumps in various flow and pressure rating with electric motor or diesel engine. These pumps generates minimum 100 bar pressure. Higher pressure pumps are available for different applications.

Diesel engine-driven high pressure high flow pump (front view)

Diesel engine-driven high pressure high flow pump (back view)

Diesel engine-driven low flow pump (15 l/min.)

Electric motor-driven pump
